

WWS AXLE WIRED

Portable kit for vehicle axle weighing.

It weighs the vehicle axles and calculates the total weight. Consisting of two WWS series portable pads and the touch screen weighing terminal with integrated printer. Wired version.

CE approved according to Directive 2014/31/EU for verification of the axle weight.

Working in cooperation with:

The best solution
for advanced industrial
applications

Weighs any type of vehicle

- WWS is the most cost-effective solution patented by Dini Argeo for weighing the axles of a vehicle.
Thanks to the low weight and ease of transport, in just a few minutes it is possible to create a weighing station for weighing any type of vehicle, regardless of the number of axles.
To optimize weighing precision, it is recommended to use leveling modules or bury the WWS pads.

Great versatility of use

- The axle weighing kit is ideal to:
 - Weigh any type of vehicle regardless of the number of axles.
 - Check the weight of the material transported by the vehicle and carry out simple checks on incoming/outgoing goods.
 - Check the weight of each axle or all the various sums of weights.
 - Weigh for limited periods of time (harvests, crops, etc..) without the need for excavations or masonry work.
 - Check for any vehicle overloads, avoiding penalties.

Available functions

- Weighing of the axle of a vehicle.
- Calculation of the total weight of the vehicle.
- Weighing with insertion of the preset tare.
- Calculation of the weight difference between two weighs.
- Database of 500 vehicles.
- Customizable texts.
- Printing and saving of the weighs on USB memory (optional).

Certifications and approvals

- The system is CE approved according to Directive 2014/31/EU (NAWI, static weighing) for verification of the axle weight.
- The system is also OIML R134 certified for in-motion weighing (dynamic) of the whole vehicle, at a maximum speed of 5km / h with a weighing accuracy of 5% (sum of the weight of the axles, depending on the rules in force in the country of use).
- The system is approved in Italy as a weighing instrument with automatic operation, for in-motion road vehicle weighing according to Decree no.267995 of 19/9/2019.
- The system is also approved for dynamic weighing in various European countries (for further information please contact our sales office).

For use in approved or dynamic applications, the use of leveling modules or burying of pads is recommended.

Stationary and in-motion weighing

- The stationary weighing function allows the vehicle to be weighed by adding up the weights of the individual axles. As well as being the most cost-effective way to weigh, it avoids penalties due to axle overloading and is particularly suitable for those who need to change the weighing location frequently.
- The in-motion weighing function allows you to minimize weighing time. The weight is acquired as the vehicle passes over the scale, without the need to stop for weighing each axle. In-motion weighing is particularly suitable for those who need to weigh frequently during the day.

VERSIONS

Available pads

The kit requires 2 pads

Codice	l x w x h (mm)	Max (kg)	d (kg)	M (kg)	d HR (kg)*
